

Clamp Forklift Part

Clamp Forklift Part - Drum Clamps are additional parts that are usually used in the chemical and petroleum businesses. They were particularly designed for the secure handling of standard 55-gallon drums. These attachments significantly enhance production since they can handle up to 4 drums per load.

Drum Clamps are even used in the food processing business and wherever product is stored in drums. The use of this additional part not only immensely increases operator productivity but enables the individual driving to be able to grab the drums in a safe manner for transport. When attempting to handle drums with regular forklift forks, much instability occurs during braking and cornering. This common drawback can be handled safely and proficiently by making use of the Drum Clamp attachment instead.
