

## Barrel Clamp

Barrel Clamps - A Barrel Clamp is really a hydraulic or mechanical attachment for a forklift. It could be used in order to squeeze the object you want to transport using the lift truck and is usually used for handling paper rolls, barrels, and kegs. A few designs of barrel clamp accessories even have a rotate function. Like for example, the rotate function permits the one operating the forklift to be able to insert a vertically stored paper into the horizontal intake of a printing press.
