

## Utility Bucket

Utility Buckets - "Slip on the forks" attachment buckets or Universal Fit buckets could be utilized with any model or design of extendable reach lift truck. If your unit is unable to be matched with a quick-tach unit, another new or second-hand universal fit bucket can be located instead. Regular universal lift truck buckets connect to forks that are up to 6" wide and are 48" long. Larger fork pockets could be prearranged through an account manager upon request.

As they slip directly onto the blades, universal fit buckets stay on the machine and are much less at risk to destruction. Compared to the quick-tach container models, universal fit buckets are 50 percent. This extra space makes them perfect for lifting irregular shaped loads like elevating roof gravel, moving large debris piles, broken up concrete, backfilling behind walls and tearing off roof trash.

### Quick-Tach Buckets

Quick-Tach Buckets are made for extendable-reach forklifts. They are designed to allow placement of material far beyond the reach of a loader. A hardened beveled cutting blade on the leading edge and on both sides reinforces strength, resistance to wear and provides supreme durability. Quick-Tach lift truck buckets are augmented by scuff bars along the bottom of the unit that shield it from abrasion.

Quick-Tach lift buckets can in several cases substitute the forks and carriage of a forklift, that may weigh anywhere between one hundred to seven hundred pounds. These buckets when installed could free up more load capacity, enabling it to deal with both larger and heavier things. The Quick-Tach is able to pour stuff around 1.5 feet higher because of the shorter depth of its bucket. These buckets are built in a custom fashion to be able to meet the specs of specific makes and models of lift trucks. It is essential to confer with a construction equipment specialist so as to find the customized Quick-Tach bucket solution for your needs.

Lift truck bucket accessories are outstanding for ground level work on construction sites. They are normally designed for moving snow in northern regions, and gravel and sand loading. Jobsite clean-up is one more function the lift truck bucket carries out well. The various uses the bucket can accomplish saves the business more time and money because it does not have to completely switch tools or machinery and this can help prevent running into overtime.
